

## Secure Fastening System

Our quality built baseboards use an innovative and sturdy fastening system; there are no screws or nails in view to lessen the appearance.

Beautiful premium American hardwood to complement hardwood and natural floor surfaces as well as paneled interiors.

Our custom wooden baseboards are an attractive alternative to stamped metal baseboards and avoid the expense and complications of radiant floor heating.

Conventional Sheet Metal Baseboard

## Get faster warm up times

Our custom solid wood free-standing perimeter baseboard heaters allow faster warm up times and individual zoning for improved performance and efficiency with unmatched aesthetics.

## An excellent value

Our wooden baseboards are competitively priced and are less expensive than radiant floor heating and metal panel heaters.

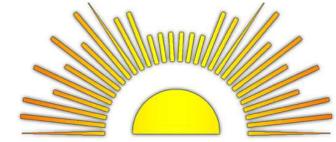

**Available in:** Red Oak, Maple, Walnut, a variety of sealers & stains, and other custom millwork configurations.

**Custom Solid Wood  
Free-Standing Perimeter  
Baseboard Heaters**

(Patent Pending)

Our custom solid wood perimeter heaters look great with hardwood and masonry floors because the components are natural solid hardwood.

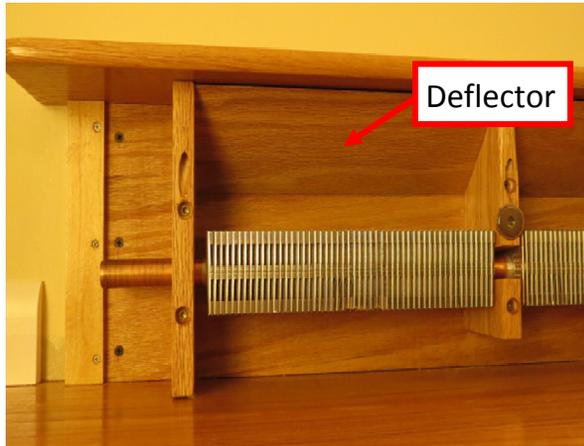

Perimeter baseboard heat provides the best available technology for comfort, zoning, and overall heating efficiency. We use only high output finned tubing for our heating elements to maximize performance.

Finally a perimeter baseboard system that complements your fine furnishings because these custom baseboards are made from furniture grade hardwoods.

Heating element made of 100% copper tubing will not split, crack, or leak.

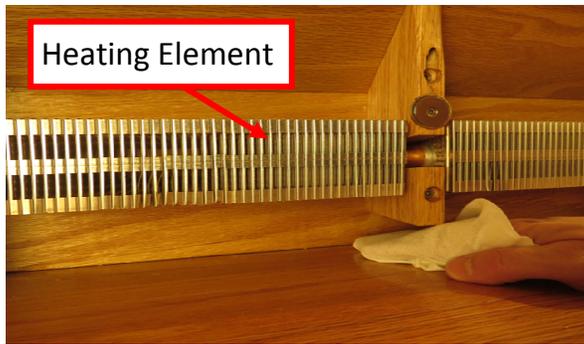

Deflector

Heating element supported by wooden struts provides silent operation; never any clinking noise from metal to metal contact. Deflector enhances warm air convection.

Wooden struts fastened to plywood base.

Struts can be used to support return piping.

Easy access for cleaning & service.

Heating Element

A complete baseboard heater, not just a cover.

Are a 100% free standing all hardwood baseboard.

Puts heat where you need it, underneath windows and along outside walls.

Will not dry or crack hardwood floors.

Unlike radiant heat, baseboard heat is not affected by the use of decorative rugs or oriental carpets that insulate a floor and cause radiant floor heating systems to have reduced performance.

**Manufactured by:** C.M.F Engineering, Inc.
